

1、配置端口白名单，允许SSH或者特定端口连入服务器：

```
iptables -A INPUT -p tcp --dport 22 -j ACCEPT
```

2、将所有其他进入服务器的数据包丢弃：

```
iptables -A INPUT -j DROP
```

3、查看本机开放nginx服务，配置完规则后不可以访问：

4、查看本机配置：iptables -L

```
root@hecs-104566:~# iptables -L
Chain INPUT (policy ACCEPT)
target     prot opt source                destination            tcp dpt:10022
ACCEPT     tcp  --  anywhere              anywhere               tcp dpt:http-alt
ACCEPT     tcp  --  103.85.169.179        anywhere               tcp dpt:http-alt
ACCEPT     tcp  --  39.144.14.159         anywhere               tcp dpt:http-alt
DROP       all  --  anywhere              anywhere
```

查看INPUT规则：iptables -L INPUT

```
root@hecs-104566:~# iptables -L INPUT
Chain INPUT (policy ACCEPT)
target     prot opt source                destination            tcp dpt:10022
ACCEPT     tcp  --  anywhere              anywhere               tcp dpt:http-alt
ACCEPT     tcp  --  103.85.169.179        anywhere               tcp dpt:http-alt
ACCEPT     tcp  --  39.144.14.159         anywhere               tcp dpt:http-alt
ACCEPT     tcp  --  223.104.41.101        anywhere               tcp dpt:http-alt
ACCEPT     tcp  --  223.104.41.100        anywhere               tcp dpt:http-alt
DROP       all  --  anywhere              anywhere
```

5、删除全部iptables配置规则：iptables -F

6、删除单条配置：删除input中的第二条规则：iptables -D INPUT 2

7、添加白名单，可以累加：

```
iptables -A INPUT -p tcp -s 223.104.41.100 --dport 8080 -j ACCEPT
```

```
iptables -A INPUT -p tcp -s 223.104.41.101 --dport 8080 -j ACCEPT
```

```
iptables -A INPUT -p tcp -s 223.104.41.102 --dport 8080 -j ACCEPT
```

```
1  #! /bin/bash
2  # 服务器iptables操作脚本
3  #查看入站配置:  bash iptablesoper.sh show
4  #删除配置:  bash iptablesoper.sh delete 规则行数
5  #添加配置:  bash iptablesoper.sh add IP 端口
6  case "${1}" in
```

```
7  show)
8      iptables -L INPUT
9      ;;
10 delete)
11     iptables -D INPUT $2
12     ;;
13 add)
14     iptables -D INPUT -j DROP
15     iptables -A INPUT -p tcp -s $2 --dport $3 -j ACCEPT
16     iptables -A INPUT -j DROP
17 esac
```
